

What is claimed is:

1. A wall mounting apparatus for a visual display, comprising:

a first plate attached to a wall; and

5 a second plate attached to the visual display, wherein the visual display is mounted to the wall by hooking the first and second plates together, such that each plate contacts the other in at least two places.

2. The wall mounting apparatus of claim 1 wherein at least one of the first

10 plate and the second plate include an angled portion and a flat portion extending away from the angled portion.

3. The wall mounting apparatus of claim 1 wherein at least one of the first

plate and the second plate include an angled portion, a flat portion and a backstop

15 portion.

4. The wall mounting apparatus of claim 3 wherein the backstop portion

extends between the angled portion and the flat portion.

20 5. The wall mounting apparatus of claim 1 wherein the first plate is

configured to include an elongate section which contacts a corresponding elongate section of the second plate.

6. The wall mounting apparatus of claim 1 wherein one of the first plate

25 and the second plate is longer than the other to permit side-to-side adjustment.

7. The wall mounting apparatus of claim 1 wherein one of the first plate

and the second plate includes two or more end stops.

30 8. A display system including a wall mounting apparatus, comprising:

a first plate attached to a wall; and

a second plate attached to the visual display, wherein the visual display is mounted to the wall by hooking the first and second plates together, such that each plate contacts the other in at least two places.

5        9.      The display system of claim 8 wherein at least one of the first plate and the second plate include an angled portion and a flat portion extending away from the angled portion.

10      10.     The display system of claim 8 wherein at least one of the first plate and the second plate include an angled portion, a flat portion and a backstop portion.

11.     The display system of claim 10 wherein the backstop portion extends between the angled portion and the flat portion.

15      12.     The display system of claim 8 wherein the first plate is configured to include an elongate section that contacts a corresponding elongate section of the second plate.

20      13.     The display system of claim 8 wherein one of the first plate and the second plate is longer than the other to permit side-to-side adjustment.

14.     The display system of claim 8 wherein one of the first plate and the second plate includes two or more end stops.
